1 STABILITY

1.1 Second order System

1.1. The Block diagram of a system is illustrated in the figure shown, where $X(s)$ is the input and $Y(s)$ is the output. Draw the equivalent signal flow graph.

Fig. 1.1.1: signal flow block diagram

Solution: Signal flow graph of given above block diagram is

Fig. 1.1.2: signal flow graph

1.2. Draw all the forward paths and compute the respective gains. **Solution:** Here,

$$P_1 = \frac{s}{s} = 1 \quad (1.2.1)$$

Fig. 1.2.3: P_1

$$P_2 = (1/s)(1/s) = 1/s^2 \quad (1.2.2)$$

Fig. 1.2.4: P_2

1.3. Draw the loops and calculate the respective gains.

Solution:

$$L_1 = (-1)(s) = -s \quad (1.3.1)$$

Fig. 1.3.5: L_1

$$L_2 = \frac{s}{-s} = -1 \quad (1.3.2)$$

Fig. 1.3.6: L_2

$$L_3 = \left(\frac{1}{s}\right) * (-1) = \frac{-1}{s} \quad (1.3.3)$$

Fig. 1.3.7: L_3

$$L_4 = \left(\frac{1}{s}\right)\left(\frac{1}{s}\right)(-1) = \frac{-1}{s^2} \quad (1.3.4)$$

Fig. 1.3.8: L_4 Fig. 1.5.10: L_2

1.4. State Mason's Gain formula and explain the parameters through a table.

Solution: According to Mason's Gain Formula,

$$T = \frac{Y(s)}{X(s)} \quad (1.4.1)$$

$$T = \frac{\sum_{i=1}^N P_i \Delta_i}{\Delta} \quad (1.4.2)$$

1.5. Find the transfer function using Mason's Gain Formula.

Solution:

Now,

P_i is the i^{th} forward path.

$\Delta = 1 - (\text{Sum of all individual loop gains}) + (\text{sum of gain products of all possible two non-touching loops}) - (\text{sum of gain products of all possible three non-touching loops}) + \dots$

Δ_i is obtained from Δ by removing the loops which are touching the i^{th} forward path.

$$\Delta = 1 - (L_1 + L_2 + L_3 + L_4)$$

$$L_1 = (-1)(s) = -s \quad (1.5.1)$$

Fig. 1.5.9: L_1

$$L_2 = \frac{s}{-s} = -1 \quad (1.5.2)$$

$$L_3 = \left(\frac{1}{s}\right) * (-1) = \frac{-1}{s} \quad (1.5.3)$$

Fig. 1.5.11: L_3 Fig. 1.5.12: L_4 Fig. 1.5.13: Δ_1

$$L_4 = \left(\frac{1}{s}\right)\left(\frac{1}{s}\right)(-1) = \frac{-1}{s^2} \quad (1.5.4)$$

$$\Delta = 1 - (-s - 1 - \frac{1}{s} - \frac{1}{s^2}) \Delta = \frac{s^3 + 2s^2 + s + 1}{s^2}$$

After removing forward path from loop1 we will get Delta1

$$\Delta_1 = 1$$

After removing forward path from loop2 we will get Delta2

$$\Delta_2 = 1$$

After removing forward path from loop3 we will get Delta4

$$\Delta_3 = 1$$

Fig. 1.5.14: Δ_2 Fig. 1.5.15: Δ_3 Fig. 1.5.16: Δ_4

After removing forward path from loop4 we will get Delta4

$$\Delta_4 = 1$$

Here,

$$T = \frac{\sum_{i=1}^N (P_i)(\Delta_i)}{\Delta} \quad (1.5.5)$$

$$T = \frac{P_1\Delta_1 + P_2\Delta_2 + P_3\Delta_3 + P_4\Delta_4}{\Delta} \quad (1.5.6)$$

$$T = \frac{1 * 1 + \left(\frac{1}{s^2}\right) * 1 + 0 * 1 + 0 * 1}{\frac{s^3 + 2s^2 + s + 1}{s^2}} \quad (1.5.7)$$

$$H(s) = \frac{s^2 + 1}{s^3 + 2s^2 + s + 1} \quad (1.5.8)$$
